3.4. Random Number Generator

The RNG utilised in evaluating the game output and games rules has been sufficiently and appropriately tested under a separate RNG testing report. Please refer to RNG report e213036QSANLD issued by eCOGRA on 12 May 2021 for further details of testing conducted over RNG.

4. ASSESSMENT AND EVALUATION METHODS APPLIED

The sections below provide a high-level overview of the assessment and evaluation methods applied.

4.1. Games and Gaming Technology

Game design testing has included verification of the game mathematics, game artwork, the theoretical RTP and player-facing game rules. Software testing has included evaluation and verification of the software implementation of the game design aspects tested, with verification procedures conducted over games rules and the actual RTP, using methods of simulation, emulation, and manual testing. Game engine testing included verification of the scaling and mapping used to convert raw RNG output to game outcomes.

| Game Assessments | |
|--------------------------|---|
| Game Software Assessment | Verification procedures over sufficiency and appropriateness of the client's internal testing conducted over the game under certification. |
| Documentation Assessment | Evaluation of the supporting game documentation to ensure that it is consistent and supports the game rules and logic present in the game. |
| Source Code Assessment | Evaluation of the pertinent modules of the game source code for mapping of rules and RNG calling. |
| Mathematical Assessment | Review of the mapping of the random inputs to game outcomes in accordance with prevailing probabilities and pay tables. Review of the game design and game mathematics that determine the theoretical RTP%. Independent mathematical calculations of RTP% utilising complete, accurate and valid simulated game data output, to verify the theoretical RTP% as per the game mathematics documentation. Game simulation (output) testing to ensure the game outcomes are randomly generated and the actual RTP is within an acceptable range of the expected RTP. |
| Playability Assessment | Inspection of game interface including artwork and graphics, and clear and correct presentation of the game rules. Evaluation of game accounting in accordance with game pay tables. |
| Functionality Assessment | Comprehensive operational and functional client-side tests over the game mechanics to ensure that game pay tables, game rules and help files are correctly implemented in the operation of the game. A check on whether it is possible to place a wager outside of the base game and ordinary course of play, and if this wager directly activates a game feature outside of the ordinary course of play. |
| Emulation Assessment | Testing of rare outcomes through emulation to ensure that game pay outs, top prizes and jackpot features (if applicable) operate correctly. |

Further documentation assessments, game functionality assessments and game artwork and game rule review assessments were conducted to verify that the game conformed to relevant certifiable requirements.
